TECHNOLOGY TRANSFER ACTIVITIES

Technology Transfer in Southampton

From 2015 to 2019 I have been in charge of research impact for the School of Physics and Astronomy at the University of Southampton. I identified, vetted, and coached entrepreneurial activities originating from research performed in the School. I have also been more broadly involved in the entrepreneurial ecosystem of the University of Southampton, mentoring undergraduate students' entrepreneurial activities at Future World, the Business Incubator of our Faculty.

Consulting and Quantika

Between 2010 and 2014 I worked as a freelance scientific valorization and technology transfer consultant, offering my services to a number of small and large companies and to private investors. I was one of the founding members in Quantika (web address Quantika.co), a consulting hub offering services along the whole chain of value on thematic linked with quantum technologies and nanophotonics.

AdQuantic SAS

In 2010 I founded AdQuantic SAS, a research-based startup applying quantum and statistical physics to the optimization of online marketing. AdQuantic was recognised as a Young Innovative Company by the French Government and it received public funding for its R&D activities. Thanks to our patented technology AdQuantic became the second European player in online bid management. In 2014 the entirety of the company, of which I remained the leading shareholder until the end, was acquired by Criteo (NASDAQ: CRTO). Techcrunch coverage: <http://techcrunch.com/2014/04/10/criteo-buys-adquantic>.

Hypios SAS

In 2008 I co-founded Hypios SAS (www.hypios-ci.com), an open-innovation startup. I was in charge of Hypios research department. During my two years tenure my department conducted research on the application of semantic web technologies to knowledge discovery, leading to both publications in prestigious conferences and patented technology. Hypios also won many national and international prizes for innovative startups: 3rd place in TechCrunch Paris competition, Silicon Alleys Top 10 and the Club 600 Entrepreneurship Award between the others.

With funding from the Leverhulme Trust and the University of Southampton I produced *Approaching Reality*, a musical video explaining the concept of quantum superposition. The composition premiered in 2015 at the Linköpings music festival. In 2016 the video was one of the 10 shortlisted finalists, out of 203 submissions from 51 countries, at the Quantum Short film festival. The film was screened worldwide and in 2018 it has been included in the science exhibition *All Possible Paths: Richard Feynman's Curious Life*, by the ArtScience Museum of Singapore.

BBC Secondment

In 2016 I spent 6 months part-time in a Royal-Society sponsored secondment at BBC. Amongst other activities I participated to the production of the 2017 Horizon episode *Strange Signals from Outer Space!*, and the 2016 The Sky at Night episode *Review of the Year*.

Pint of Science

In 2015 my group organised for the first time the Pint of Science Festival in Southampton, where we had the chance to showcase our research in a local pub to a paying public. The event was sold out.
